

Now five months into the COVID-19 pandemic, Nevada remains on a slow path to recovery after being one of the states hit the hardest by this public health crisis. While many economic indicators are beginning to exhibit positive growth trends again, they are still significantly lower relative to their benchmarks from the prior year. On August 3, Governor Sisolak introduced Nevada's long-term recovery plan. The plan shifts away from a phased reopening approach to a long-term strategy, increasing enforcement by targeting specific zip codes and individual businesses that are not compliant with COVID-19 mitigation measures. The intent of this new plan is to keep more businesses open and avoid broad closures of whole industries. With the number of positive cases still high despite a recent downward trend, state and business leaders are prioritizing containment measures in order to keep the public safe.

Economic Briefing

AUGUST 2020

ISSUE EIGHT | VOLUME FOURTEEN

Employment trends have continued to improve slightly as Nevada's labor market benefits from the re-opening of the economy, experiencing positive growth moving into August. The statewide seasonally adjusted unemployment rate fell from 15.2 percent in June to 14.0 percent in July. This is a sustained decline from the highest rate ever recorded in the state during April, more than double its current level at 30.1 percent. The most recent period's gains can be attributed to the addition of 14,800 jobs this month, 3,900 of which came from the professional and business services sector. This marks the third straight month that jobs have been added to the Nevada economy. Despite this, the unemployment rate remains 4 percentage points higher than the current national average and 10.1 percentage points higher than where it stood in July 2019.

The slower employment growth this month was also reflected in unemployment

insurance claim trends through July 2020. Initial claims totaled 66,698 in July, up 39 percent from June claims. Though an uptick, this still represents a step toward recovery as the months of March and April this year both saw initial claim totals exceed 200,000. Continued claims hovered above 300,000 for most of the month, a modest rise relative to the prior period. In addition to unemployment insurance, Governor Sisolak signed an extension of the Pandemic Unemployment Assistance (PUA) program allowing Nevadans to claim eligibility through December. The PUA program saw 12,606 initial claims filed in the week ending August 8, a decrease of 31.8 percent from the previous week's total of 18,495. This is the fewest number of PUA initial claims filed in a week since the program began.

Nevada's housing market continued to improve moderately this summer. In June, single family residential units permitted

« Continued From Cover

were 65.3 percent higher than the previous month while multi-family units permitted experienced a decline of 14.8 percent over the same period. Permits for both single and multi-family units are down relative to the same period last year. In the first quarter of 2020, housing prices rose 2.5 percent from the prior quarter, and 4.1 percent from the same quarter last year while the state's foreclosure inventory also fell 8.0 percent.

Nevada continues to be highly vulnerable in the current economic climate. Being a state that is largely dependent on tourism comes with additional implications. The general uncertainty surrounding public health will serve as a deterrent to travel for the foreseeable future. Consequently, it will be a long time until tourism returns to pre-COVID levels. Gaming revenue has started to recover, jumping nearly 10,000 percent from May to June 2020 as casinos in Nevada were allowed to reopen. Despite the increase, gaming revenue is still 45.6 percent below the same period last year. Similarly, visitor volume grew by more than a million visitors in June but remains 66.2 percent below the June 2019 level. With hotel occupancy down 14.5% in the first quarter of 2020, navigating a feasible and safe approach to welcoming guests back to Nevada will prove imperative. Ultimately, the economy will continue to reflect the changing public health landscape and will likely recover as the health risk associated with travel and large events begins to subside.
